

Water Ponding Repair Kit

GreenSlope™ is a roof leveling compound that helps eliminate water ponding areas on flat rooftops. The cured material is similar to that of a professional running track or playground surface and can withstand tough climates as well as heavy foot traffic.

THE PROBLEM

Ponding water is one of the most common problems for contractors and building owners. Water left standing on a roof 48 hours after a rain can cause:

- ! Leaks
- ! Membrane Damage
- ! Slip Hazards
- ! Voided Warranties
- ! Structural Damage
- ! Algae & Mold Growth
- ! Insect Problems
- ! Premature Failure

BENEFITS OF GREENSLOPE

GreenSlope fills in low areas to bring the roof back to it's original slope and redirect water towards drainage areas.

Lightweight	Long Lasting	Multi-Use
Reduces stress on the roof system	Made from durable EPDM	Around low drains & scuppers
1/5 the weight of concrete alternatives	Persists through freeze/thaw cycles	As walk pads & pitch-pan filler
1/2 the weight of ponding water	Can sustain heavy foot traffic	Protection around curbs & HVAC units

ASSET MANAGEMENT

Extend the lifespan of your roof at a fraction of the time and cost it takes to install a new drain or tapered insulation.

TOPCOATS

- White Acrylic
- Modified Mastic
- Emulsions
- Aluminum Mastic
- Elastomerics
- Membranes
